  - Forward Files
  - Users
  - Catchalls
- Mailing List Manager
  - info
  - test
  - Create New List
- Access Settings
  - POP Authentication
  - Access Control
- Add an Email Account

**Email Manager Introduction**

The tools in the Email Manager are used to manage all of your server's mail-related services.

**Message Delivery Manager** is used to configure how mail is delivered to your server through virtmaps, aliases, users, and catchall addresses.

**Mailing List Manager** lets you create, maintain, and send messages to an unlimited number of robust mailing lists.

**Access Settings** are used to allow or prevent groups or individuals from using your server's mail services to send mail across the Internet.

**Add an Email Account** to allow someone to receive mail and retrieve it with a POP or IMAP mail program.

  - Create New List
- 152c Access Settings
  - 153c POP Authentication
  - Access Control
- 152d Add an Email Account

**Mailing List Manager**

The Mailing List Manager is an easy to use interface to the robust Majordomo mailing list program. You can allow people to subscribe and unsubscribe to your lists, or manage them manually. You can also send messages easily to your lists and optionally allow your users to send to them to, providing email based discussion forums.

These are the mailing lists currently on your server.

info	List Properties	View/Edit Members	Compose A Message
test	List Properties	View/Edit Members	Compose A Message

Create a new mailing list.
